

## Progress report

Siyuan Zhang (siyuan3)

### 1. Task completed:

For this project, I have already downloaded the dataset, wrote a couple of manually engineered features and trained basic models( linear regression, logistic regression, SVM) using these features as inputs on the training dataset.

### 2. Pending tasks:

The performance not yet reaching the baseline but close. I'm planning on adding more features and using more advanced models such as deep neural networks for classification. Im confident that I will be able to outperform the baseline by a fair amount of margins.

### 3. Challenges:

Not really at this point, everything is ok and progress being made matches my plan.
